Example of File Handling

Q. Allow the user to write in file.txt and if user type exit file should get close.

```
-> abc = input ("Do you want to write in the file? (YES/NO)")
b = ["end", "END"]
While abc == "yes" or abc == "YES":
        file = open ("file.txt", "w")
        asf = 1
        while asf <=5:
                xyz = input (" ")
                file.write(xyz)
                for C in xyz:
                        for d in b:
                                if c in b:
                                        file.close()
                                        asf = 6
                        asf =+ 1
```
